5. Concluding Remarks

It was a nice experience while doing this project. We worker for only one season (2008) not multi season. We have tried hard for multi season, but we did not understand how to connect each match, delivery, players season wise. In our project we have tried to insert all data's of ipl season 2008. In fact, we have also inserted some additional data from ourselves such as umpire's nationality, age player's nationality, date of birth then IPL teams initial and so on. In delivery table some of the data are not uploaded properly because of player name mismatch. We have tried our best to insert as much data's as we can (about 12 thousand).

We have faced a lot of problems during this project. One of the biggest problems was data insertion. In the given data's from delivery.csv the names of the players are given in short form Like BB McCullum. But I have generated a player data using AI that contains the full name of the player Like Brendon McCullum. There is clear mismatch. We have tried our best to correct all the mismatches. This the reason that all data of delivery table are not uploaded (around 1000). Same result for wickets table. But except these two table all other data are 100% uploaded.

While creating Point Table report, it was very challenging part for us to establish it. But we have succeeded.

We have also uploaded all teams' logo, images of the venue and uploaded images of players as much as we can.

In conclusion, this project would not have been possible without effective teamwork. With the help of this project, we understood that how important a teamwork is.
